

METHOD AND SYSTEM FOR DYNAMICALLY GENERATING A WEB-BASED
USER INTERFACE

ABSTRACT OF THE INVENTION

5 A method and system for dynamically generating web based
user interfaces. In one embodiment, a method is disclosed
for displaying a user interface over a network to a user.
The method begins by reading an HTTP request for
authentication from a browser associated with the user. The
10 HTTP request comprises credential information associated with
the user. Based on the credential information, a first plug-
in module from a plurality of plug-in modules is invoked to
authenticate the user. Also, each of the plurality of plug-
in modules provide similar authentication services. An
15 authentication user interface is dynamically generated based
on the HTTP request and configuration properties that are
defined by the first plug-in module.
